

1.Start XAMPP Services

1. Open **XAMPP Control Panel**
2. Click **Start** for:

Apache MySQL

3. Status should turn **green**

2. Open phpMyAdmin

1. Open your browser
2. Type:
3. `http://localhost/phpmyadmin`
4. phpMyAdmin dashboard will open

3. Create a Database (if not already created)

1. Click **Databases** tab
2. Enter database name (example: college)
3. Click **Create**

4. Select the Database

- Click the database name (college) on the **left panel**

5. Run SQL Queries

Method 1: Using SQL Tab (Most Common)

1. Click the **SQL** tab
2. Type your query

Example: `CREATE TABLE student (`

```
    roll_no INT PRIMARY KEY,  
    name VARCHAR(50),  
    dept VARCHAR(30),  
    marks INT
```

`);` Click **Go** Message: *Query OK*

Method 2: Insert Data

```
INSERT INTO student VALUES  
(1, 'Asha', 'CSE', 85),  
(2, 'Rahul', 'ECE', 78);
```

 Click **Go**

Method 3: Select / View Data

```
SELECT * FROM student;
```

Result appears below in **table format**

6. Run Queries from a `.sql` File (Optional)

1. Click **Import**
2. Choose `.sql` file
3. Click **Go**

7. Common Errors & Fixes

- ✗ *MySQL not running* → Start MySQL in XAMPP
- ✗ *No database selected* → Click database name before running query
- ✗ *Syntax error* → Check commas, brackets, semicolon

8. Stop Services (After Work)

- Go to **XAMPP Control Panel**
- Click **Stop** for Apache & MySQL
